@jhibbets | #OSSummit

“We’re a new kind of publication: newsroom-less with hundreds of writers from various backgrounds, expertise, and skill levels. Our focus on writing articles that address readers’ needs is what drives us every day. And having many voices chiming in to help with those problems is what makes Opensource.com a go-to resource for beginners as well as veterans.”

Jen Wike Huger, Editorial manager

How we performed in 2018

1,000+ articles

Averaging 90 articles/month

@jhibbets | #OSSummit

1.5M page views

Grew from 1.2M to 1.5M page views in 2018

[2018 average]

@jhibbets | #OSSummit

1M unique visitors

Grew from 700k to 1M unique monthly visitors

@jhibbets | #OSSummit

1.1M views from search

Grew from 750k to 1.1M page views from search (organic)

>60% community

Staff curates and solicits content from the open source community

[2018 average]

>20% community
moderators

[Yearly]

33% new authors

[2018 average]

44 authors

[2018 average]

20k views/month

From Twitter

@jhibbets | #OSSummit

15k views/month

From Facebook

And continuing to trend downward

@jhibbets | #OSSummit

75,000 subscribers

Baking images

The first step toward defining it in a readable, extensible format. This makes it possible to create machines from the configuration—a process known as *baking*. An open source infrastructure management and baking tool is introduced below.

Packer makes it possible to define infrastructure configuration in a human-readable, **JSON**-like format. Packer can bake images for several platforms, including **AWS**, **VMware**, **VirtualBox**, and others. With an open source plugin model, more platforms are being added by the community.
